SUMMARY

Artificial Intelligence Engineer with strong hands-on experience in Machine Learning and Deep Learning, working on multiple advanced real-world projects.
Developed impactful solutions including an AI-based recruitment system. Also experienced in UI/UX and graphic design, contributing to user-centered and visually effective application interfaces.

PROFESSIONAL EXPERIENCE

- AI Trainee – Zewail City of Science and Technology(training 1 month)
- Trained in Artificial Intelligence concepts, Machine Learning, and applied AI techniques.
 - Worked on practical AI tasks and problem-solving applications.
- AI & Cybersecurity Trainee – British University in Egypt (BUE) (training 2 month)
- Completed intensive training in Artificial Intelligence and Cybersecurity fundamentals.
 - Gained hands-on experience in secure systems and AI-driven solutions.
- Computer Vision Trainee – National Telecommunication Institute (NTI) (training 1 month)
- Trained in Computer Vision techniques including image processing and object detection.
 - Applied OpenCV and deep learning models in real-world scenarios.
- Python Trainee – Egyptian Russian University (ERU) (training 1 month)
- Completed practical training in Python programming for data processing and AI applications.
 - Built small projects focusing on problem solving and algorithmic thinking.
- AI Trainee – NVIDIA(training 1 month)
- Received training in AI and deep learning concepts using industry-standard tools.

PROJECTS

AI-Driven End-to-End Recruitment System	2025
Designed an intelligent recruitment platform using NLP, Machine Learning, and Large Language Models to perform semantic CV analysis, bias-aware job matching, automated technical and behavioral assessments, and explainable candidate ranking across the hiring lifecycle.	
Plant Disease Classification	2025
Built a deep learning model to identify and classify plant diseases from leaf images.	
Early Lung Disease Detection	
Developed a CNN-based system for early detection of lung abnormalities from medical images.	
Helmet Detection	2024
Implemented YOLOv8-based computer vision model for detecting safety helmets in real-time.	
Hand Gesture Recognition System	

Developed a MediaPipe-based system to recognize hand gestures for control applications using keypoint and point history classifiers.

SKILLS

- Programming Languages
- Problem-Solving & Critical Thinking
- Microsoft office
- Cash handling
- Work under pressure
- Communication
- Interpersonal skills
- Teamwork
- Time Management & Organization
- Critical thinking

EDUCATION

Bachelor of Artificial Intelligence | Egyptian Russian University | Expected Graduation: 2026
Relevant coursework: Machine Learning, Deep Learning, Natural Language Processing,
Computer Vision, Data Science, AI Project Management

ADDITIONAL INFORMATION

- **Languages:** English, Arabic
- **Certifications:** Ecpc 2023 (programming global competition) , Ecpc 2024
Participated in the ROV (remotely operated vehicle) competition (eru)

Participated in the sumo robot competition
